

Name:- Om Kumar

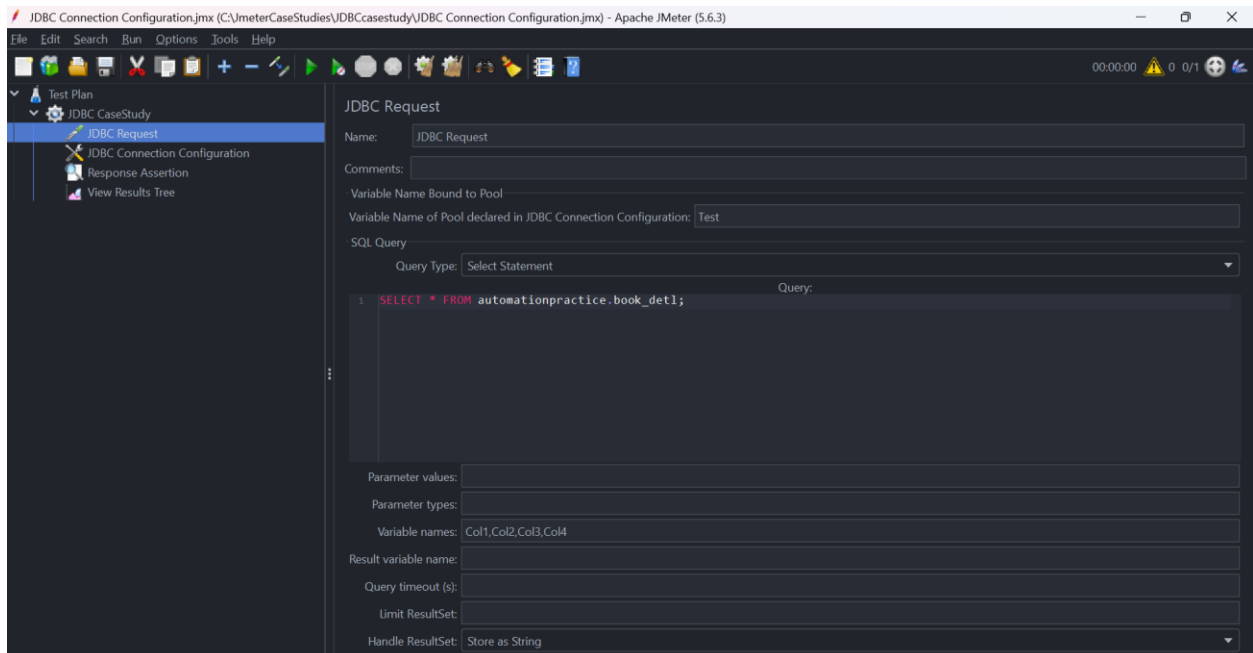

Case Study: JDBC Response Validation

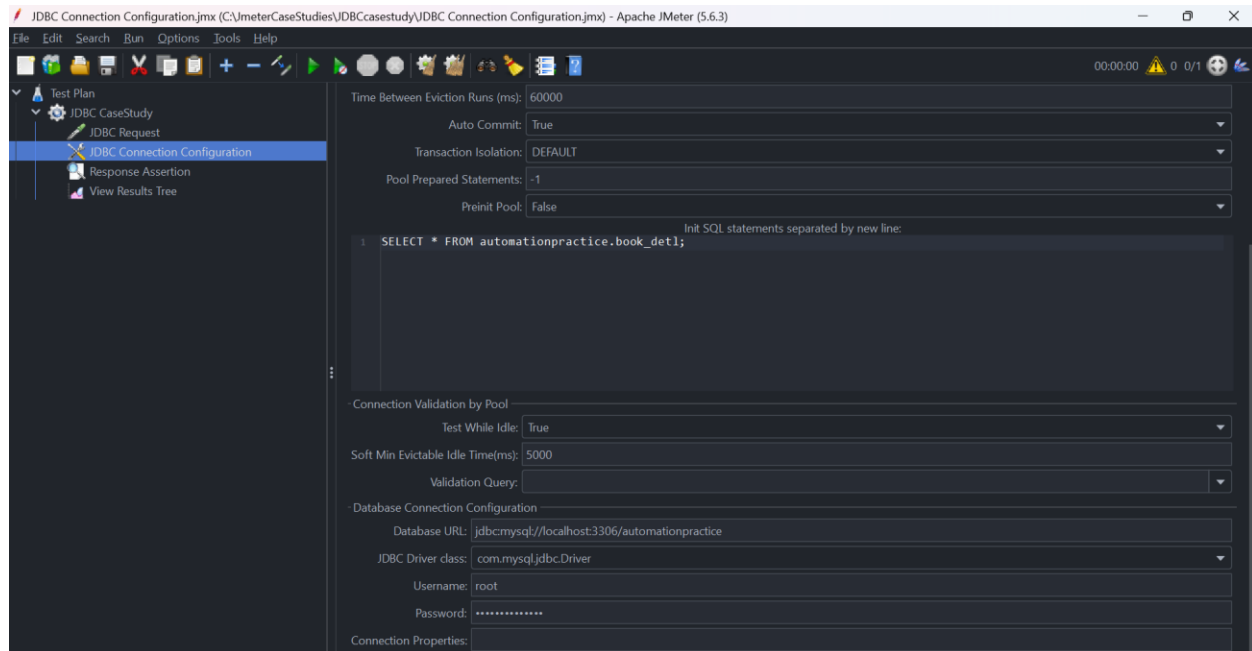

EmpID:- 85009869

Step 1:- In Jmeter , initially create a .jmx file .

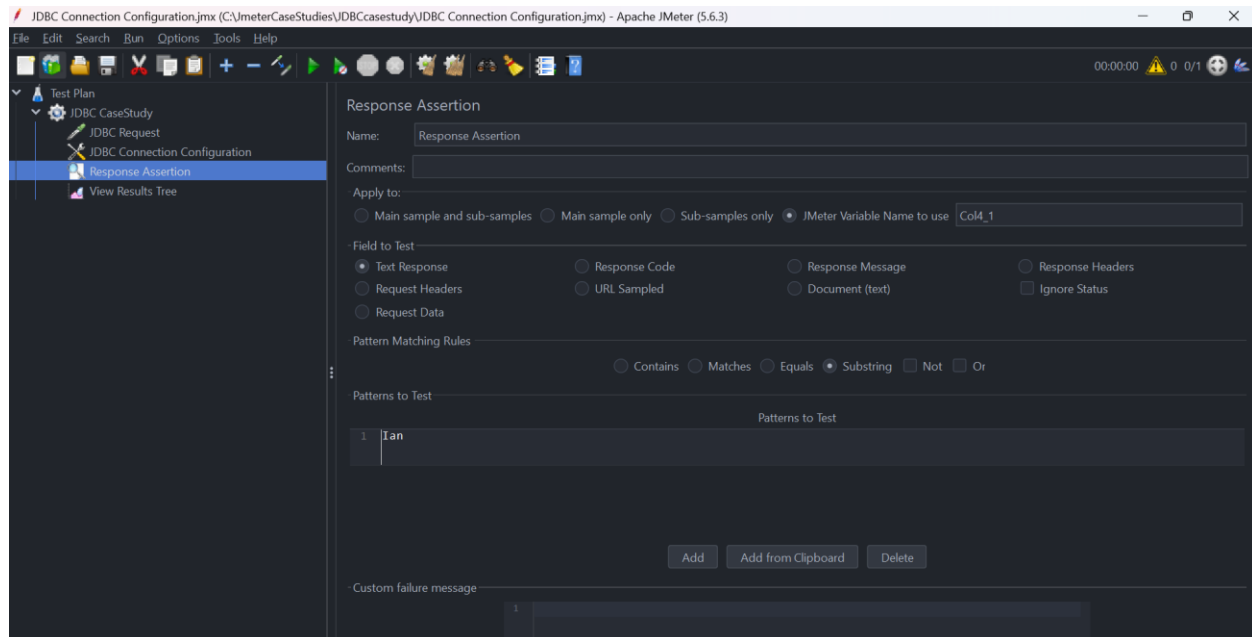

Step 2:- Add a jdbc request and jdbc configuration.

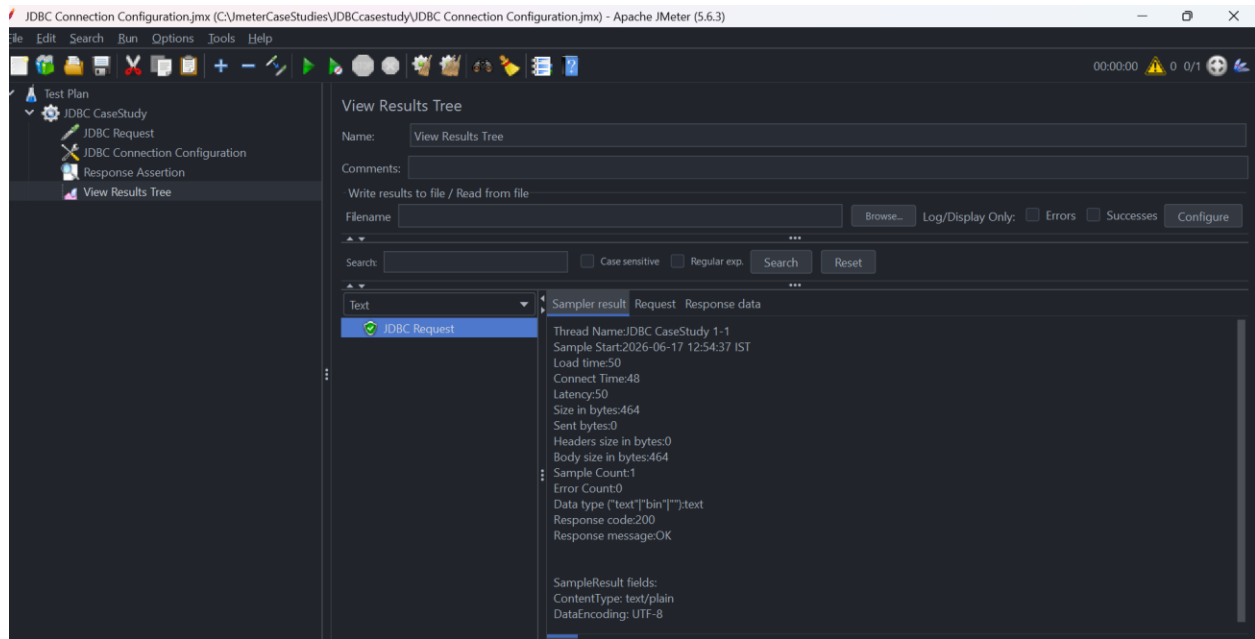

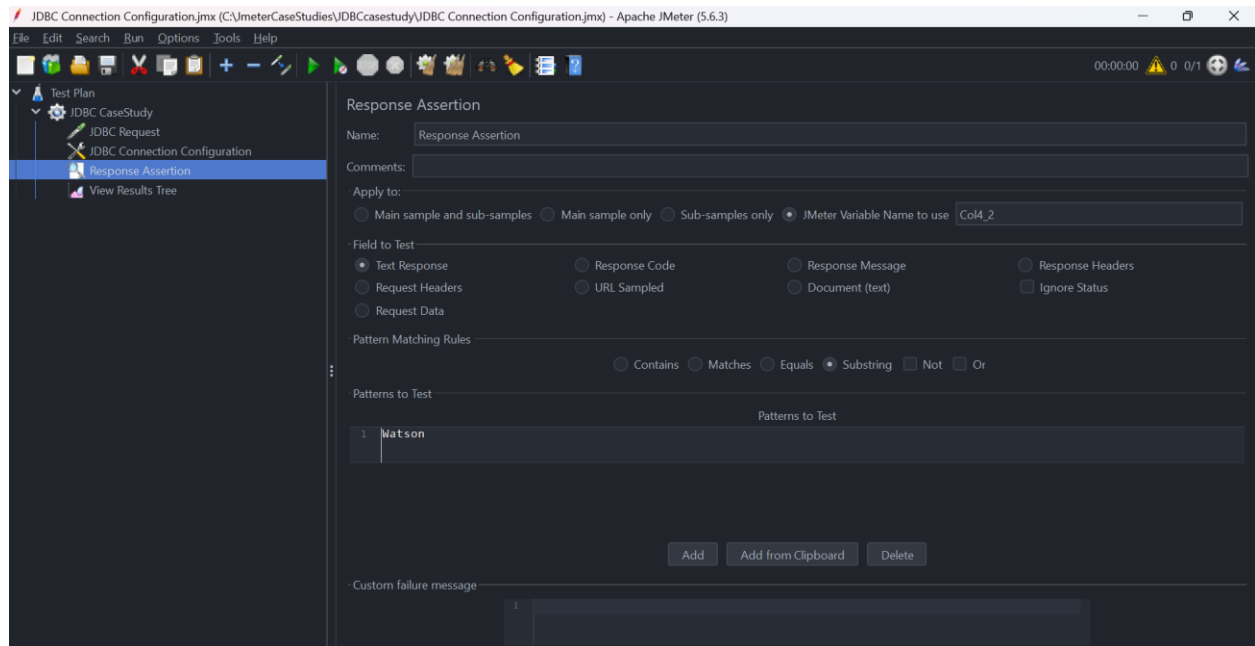

Step 3 :- Add response assertion and validate the responses in view result tree.

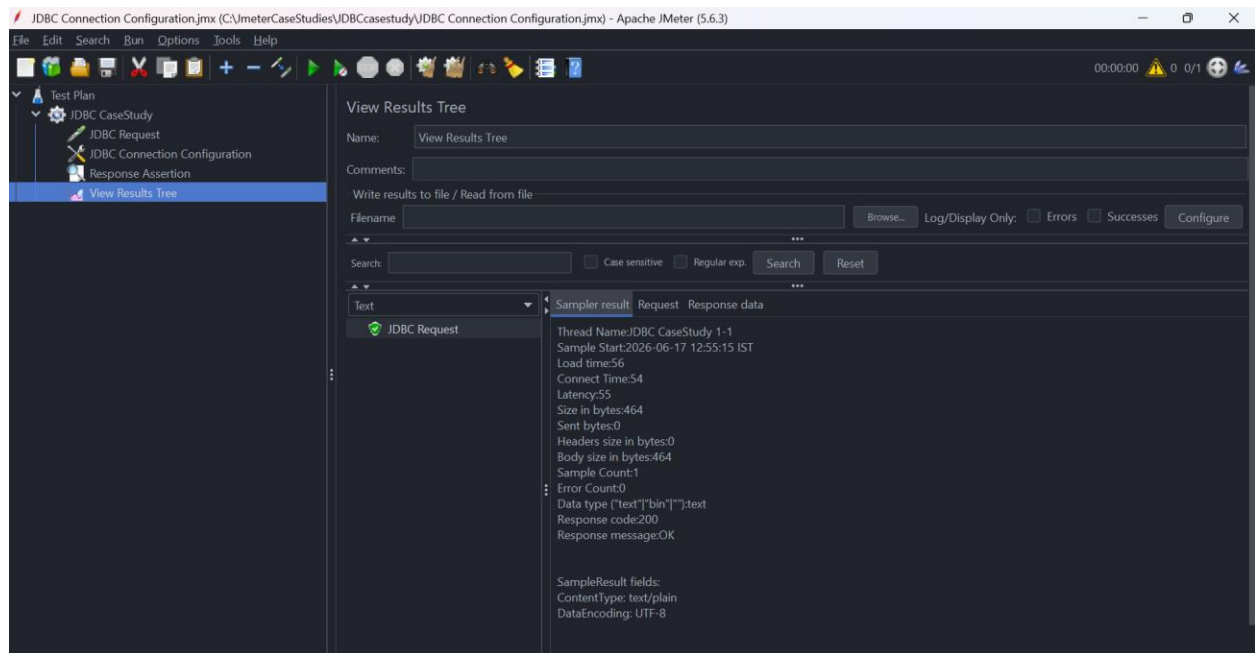

1. Validating response for Ian from database table using jmeter:

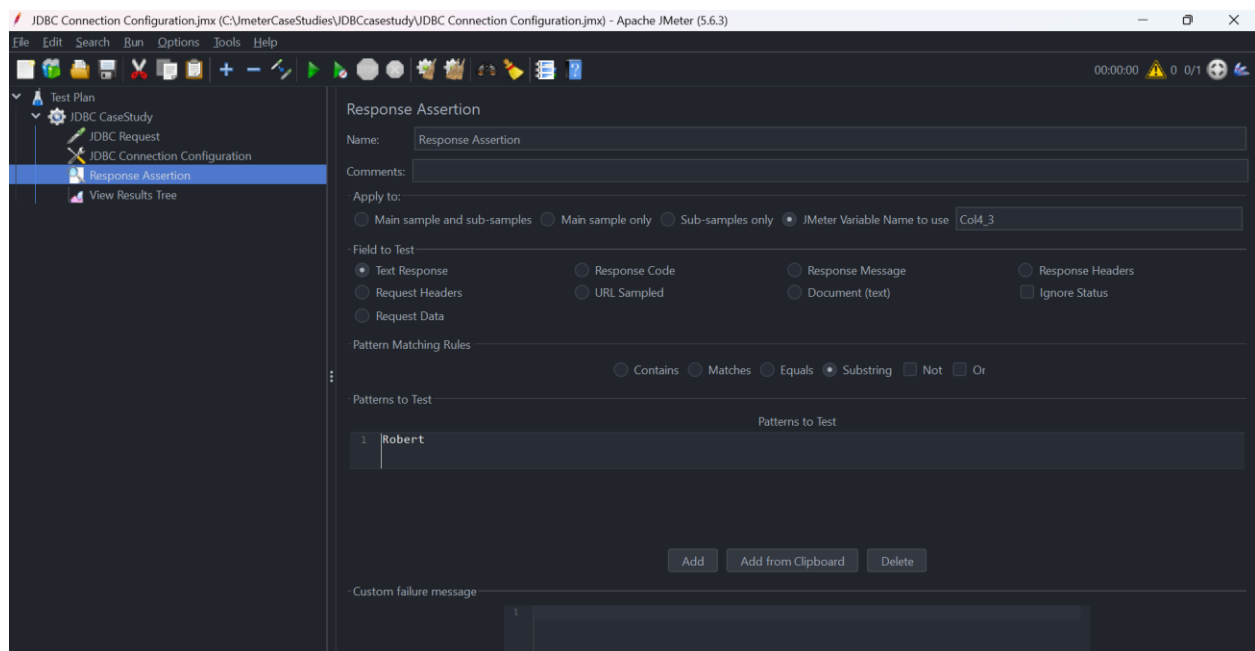

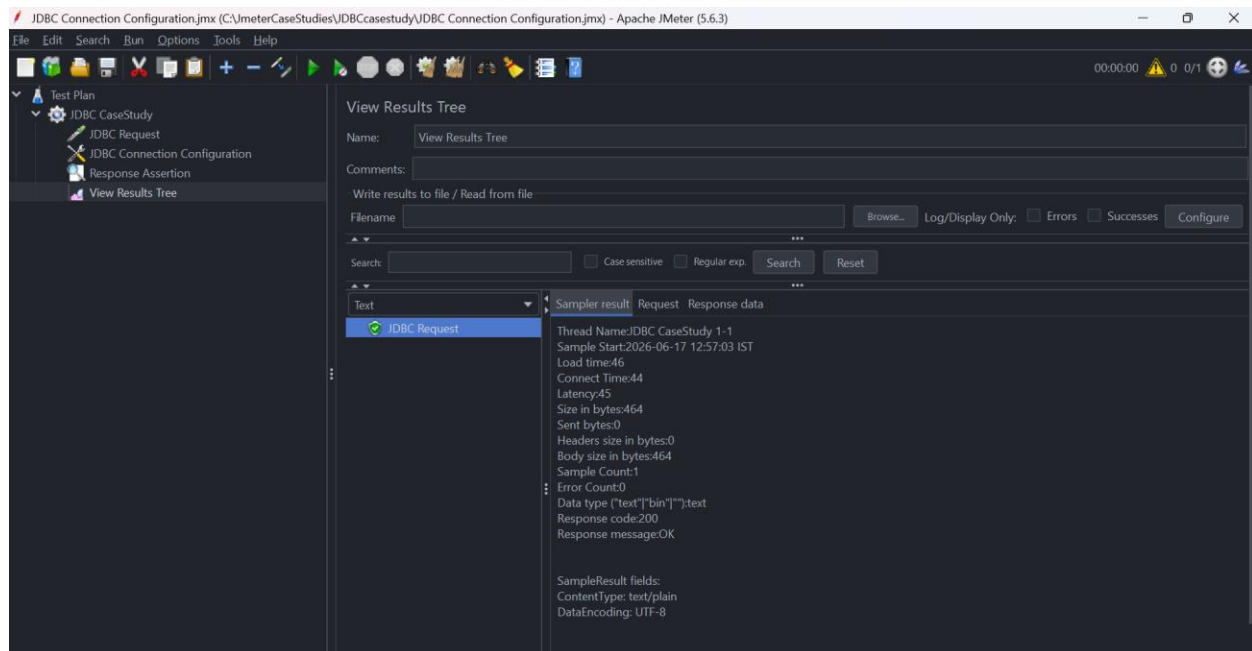

2. Validating response for **watson** from database table using jmeter:

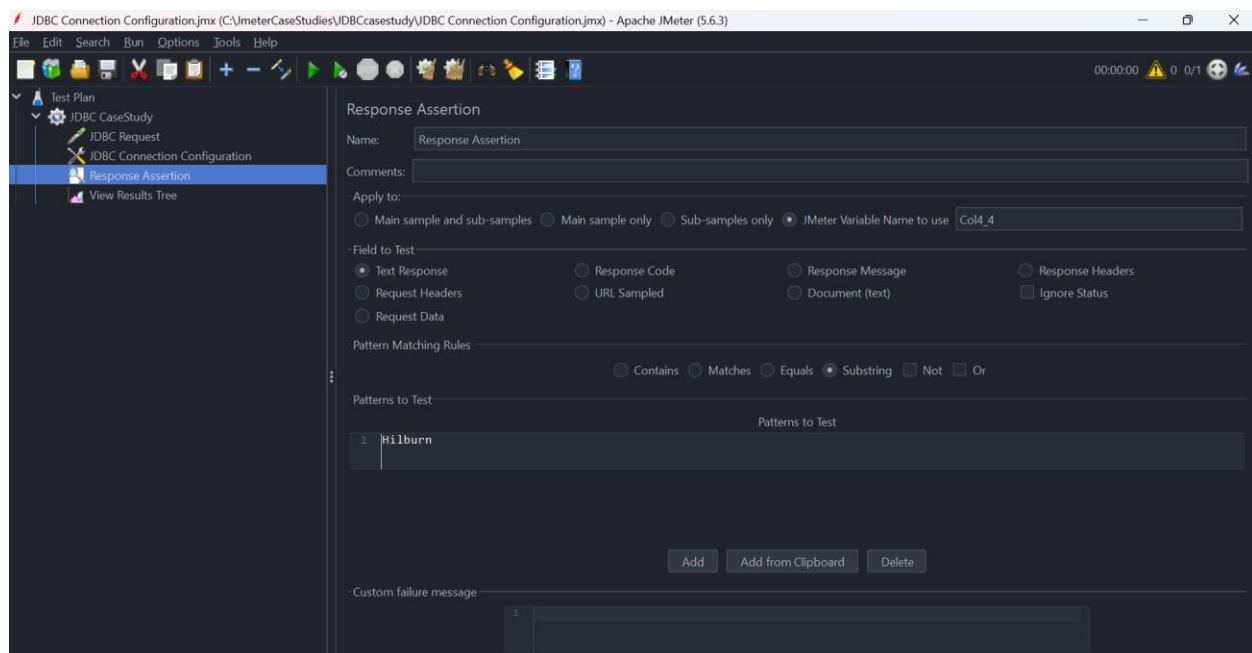

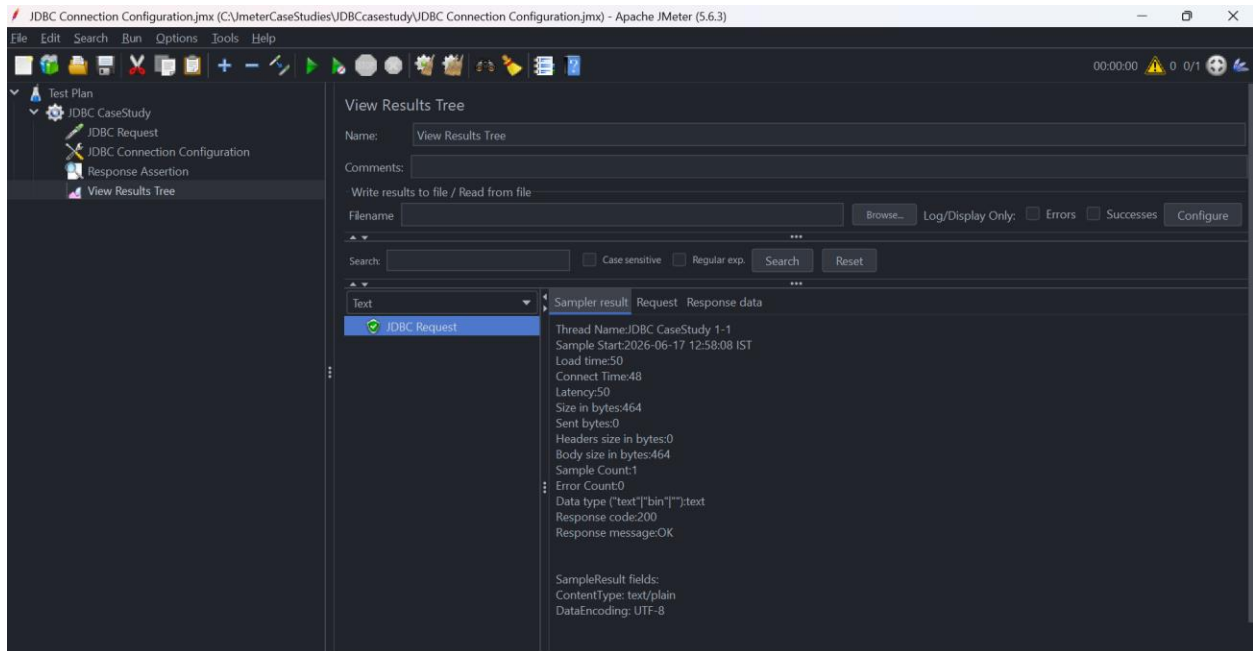

3. Validating response for **Robert** from database table using jmeter:

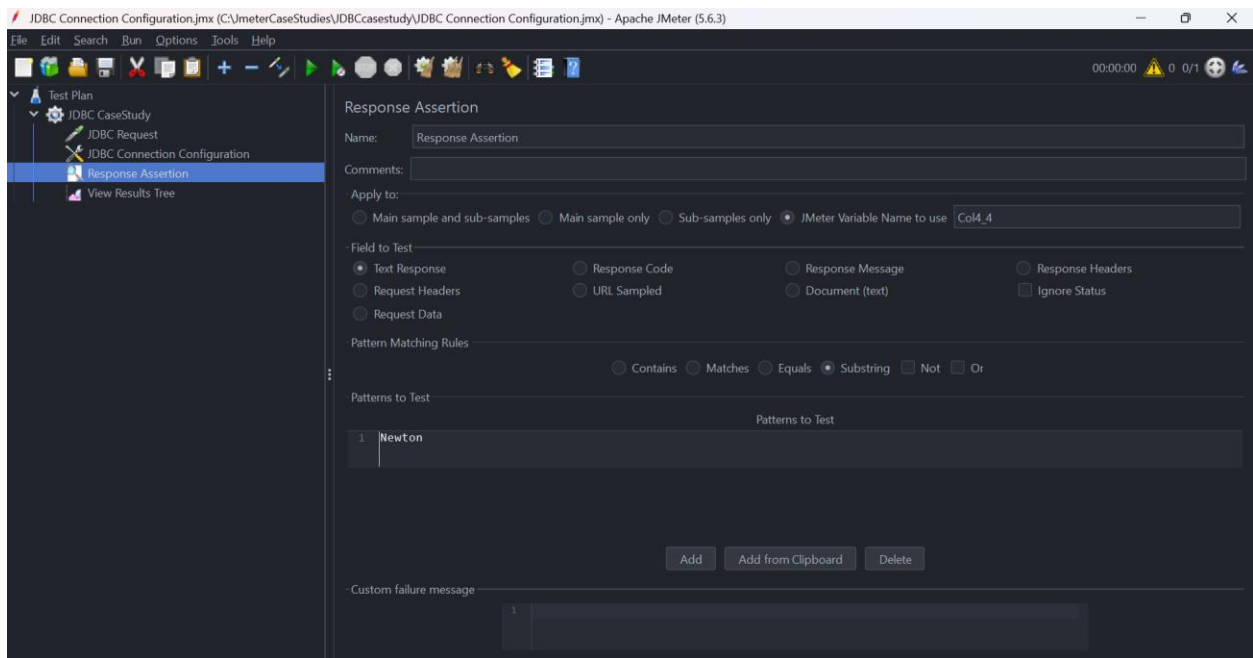

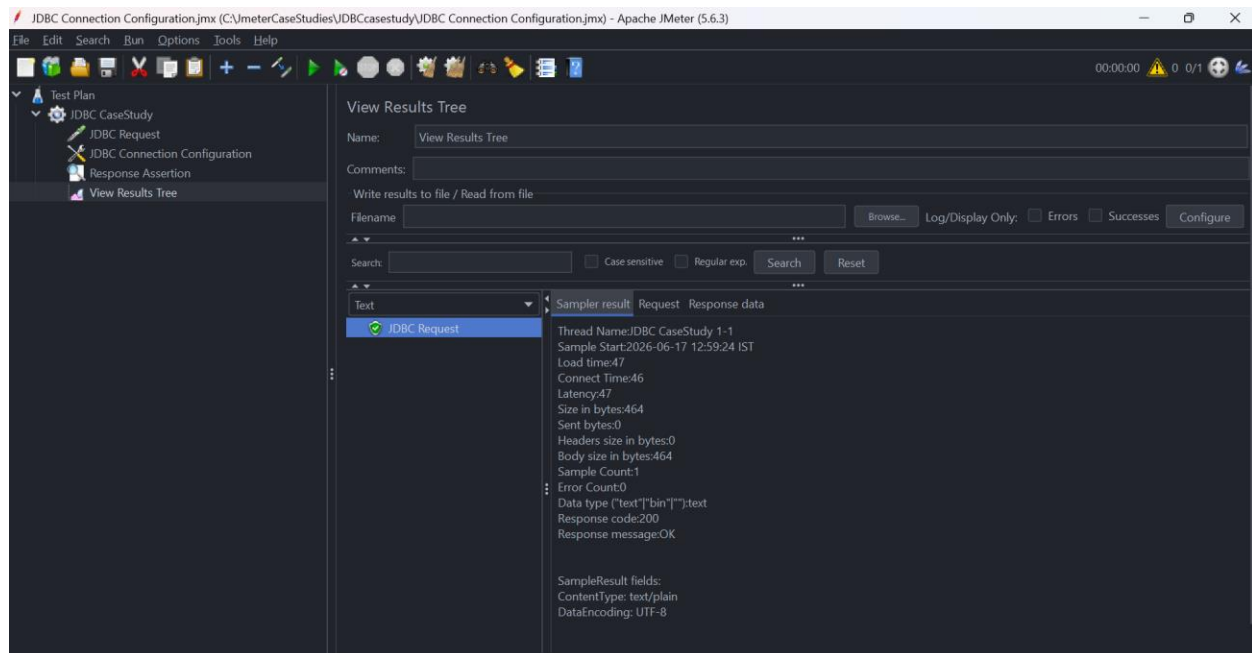

4. Validating response for **Hilburn** from database table using jmeter:

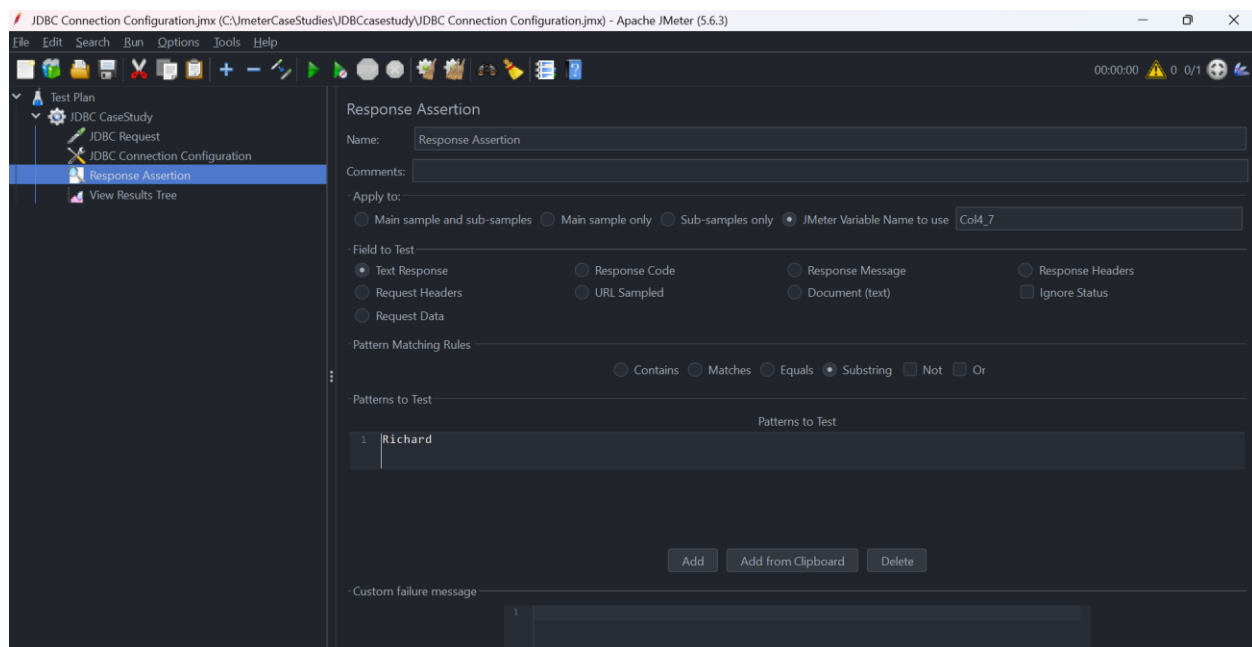

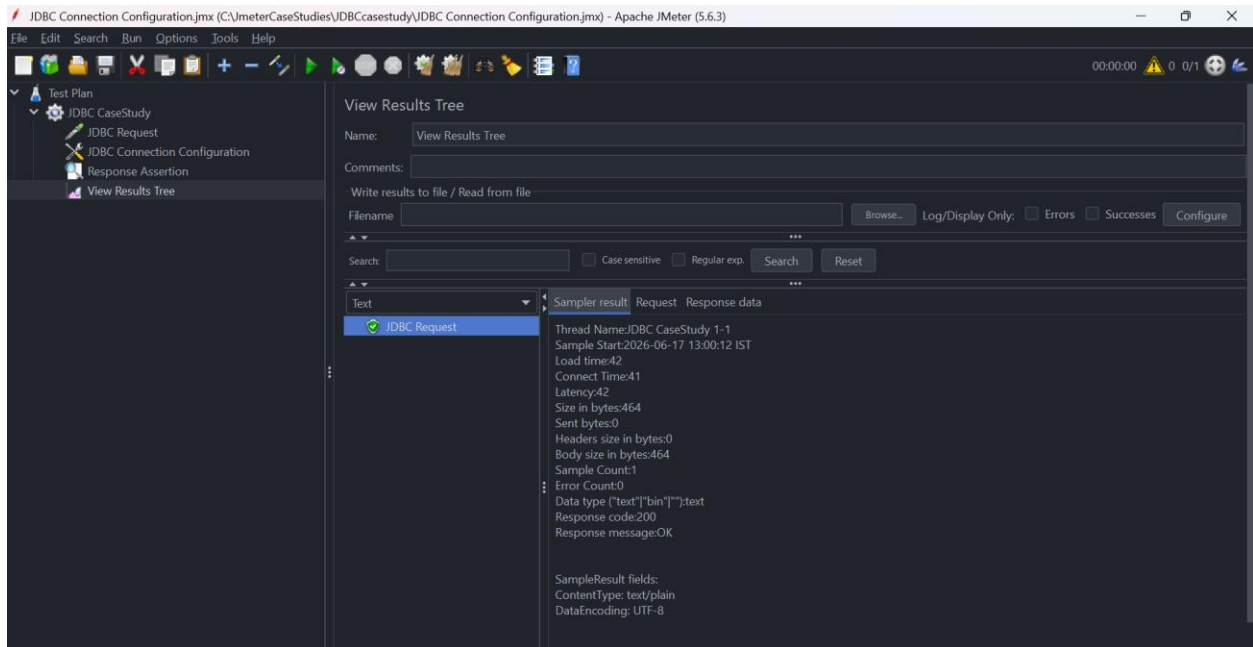

5. Validating response for **Newton** from database table using jmeter:

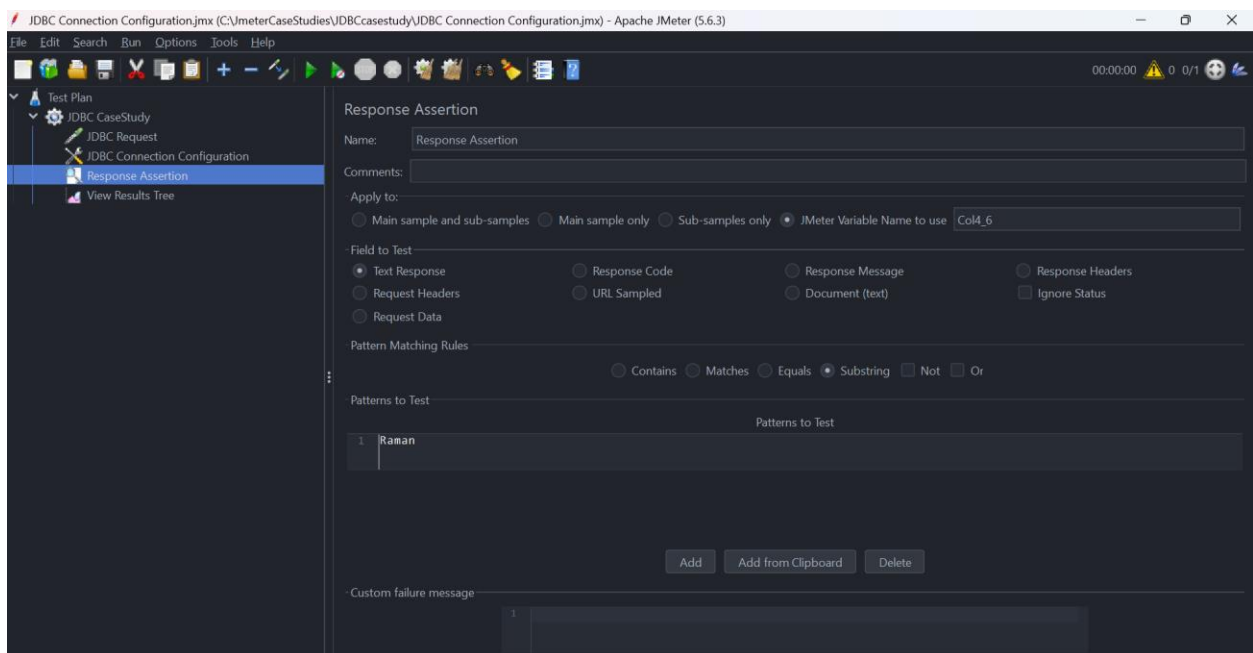

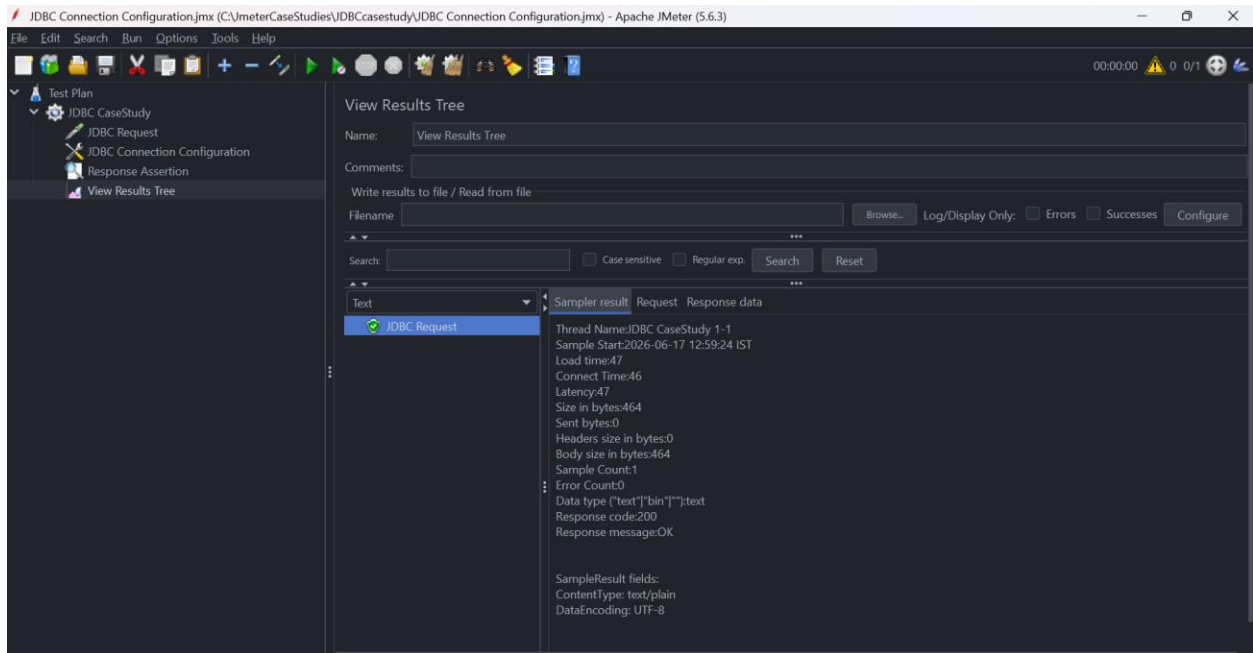

6. Validating response for **Richards** from database table using jmeter:

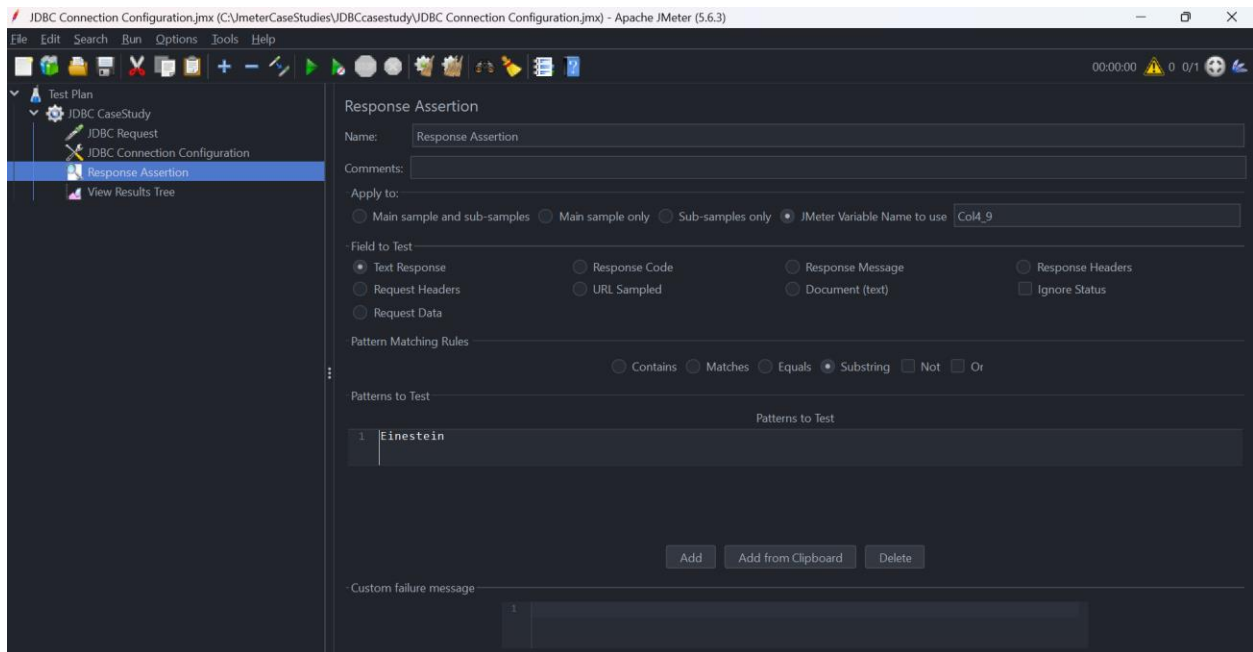

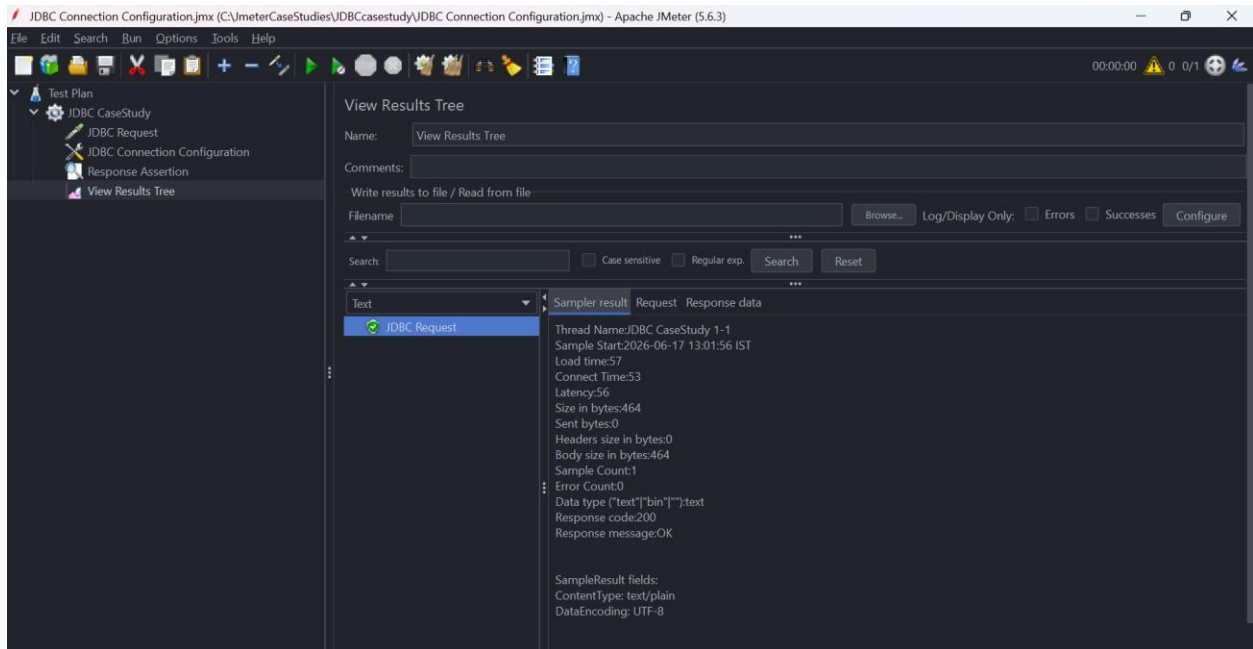

7. Validating response for **Raman** from database table using jmeter:

8. Validating response for **Einstein** from database table using jmeter:

9. Validating response for Feynman from database table using jmeter:
