Banking Application

Step 5: Start JMeter & create thread group

Step 6 : Add Loop Controller & add Random Controller under the Loop Controller

Step 7: Add 10 HTTP Requests under Random Controller & add Constant Timer of 5 sec for each requests

Step 8: Add Listeners - View Results Tree & Aggregate Graph

The screenshot shows the Apache JMeter 5.6.3 interface. On the left, the Test Plan tree is visible, showing a hierarchy starting with 'Banking Application', followed by 'Loop Controller', 'Random Controller', and a series of 'HTTP Request' and 'Constant Timer' elements. The 'View Results Tree' listener is highlighted in the tree. On the right, the 'View Results Tree' panel is open, displaying a list of test results under the 'Text' tab. The results include 'Investor Inside - HTTP Request', 'Other - HTTP Request', 'Deposit HTTP Request', 'Home - HTTP Request', and 'Business leading - HTTP Request'. The 'Raw' tab is selected at the bottom of the panel.

The screenshot shows the Apache JMeter 5.6.3 interface with the 'Aggregate Graph' listener selected in the Test Plan tree. The 'Aggregate Graph' panel is open, displaying a table of performance metrics and a bar chart. The table includes columns for '# Samples', 'Average', 'Median', '90% Line', '95% Line', '99% Line', 'Min', 'Maximum', 'Error %', 'Throughput', 'Received KB/sec', and 'Sent KB/sec'. The bar chart shows the distribution of response times for various test elements.
