What, Why & When Testing

What ?

Testing MakeMyTrip to verify Flights, Hotels, Cabs, Holidays and Payment functionalities.

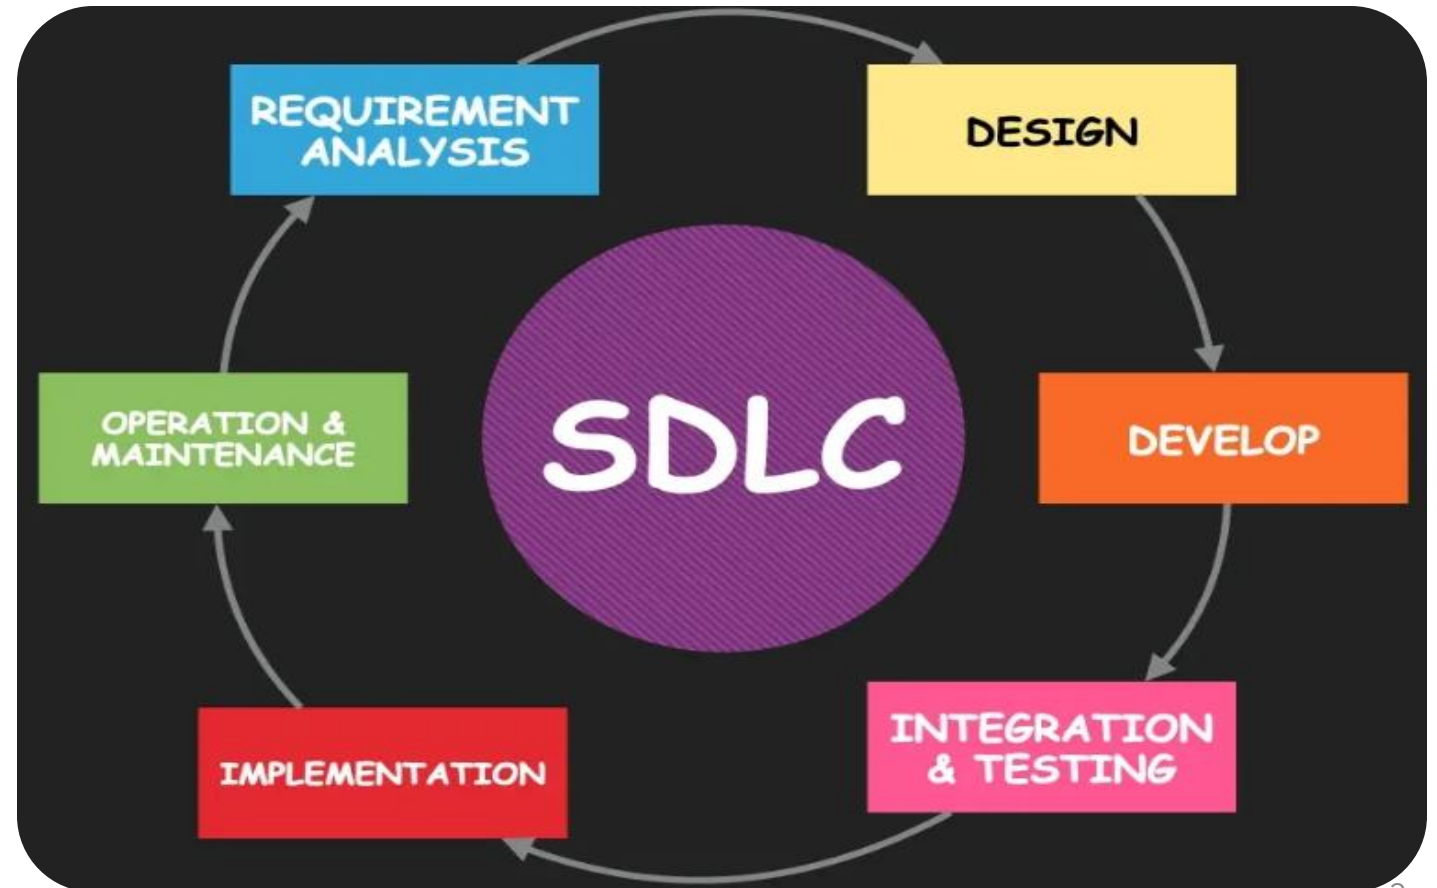

Why ?

- Ensures booking accuracy
- Prevent Payment Failures
- Improve Customer Experience
- Reduce Production Defects

When ?

Throughout SDLC

1. Requirement Analysis
2. Development
3. Testing
4. Deployment
5. Maintenance

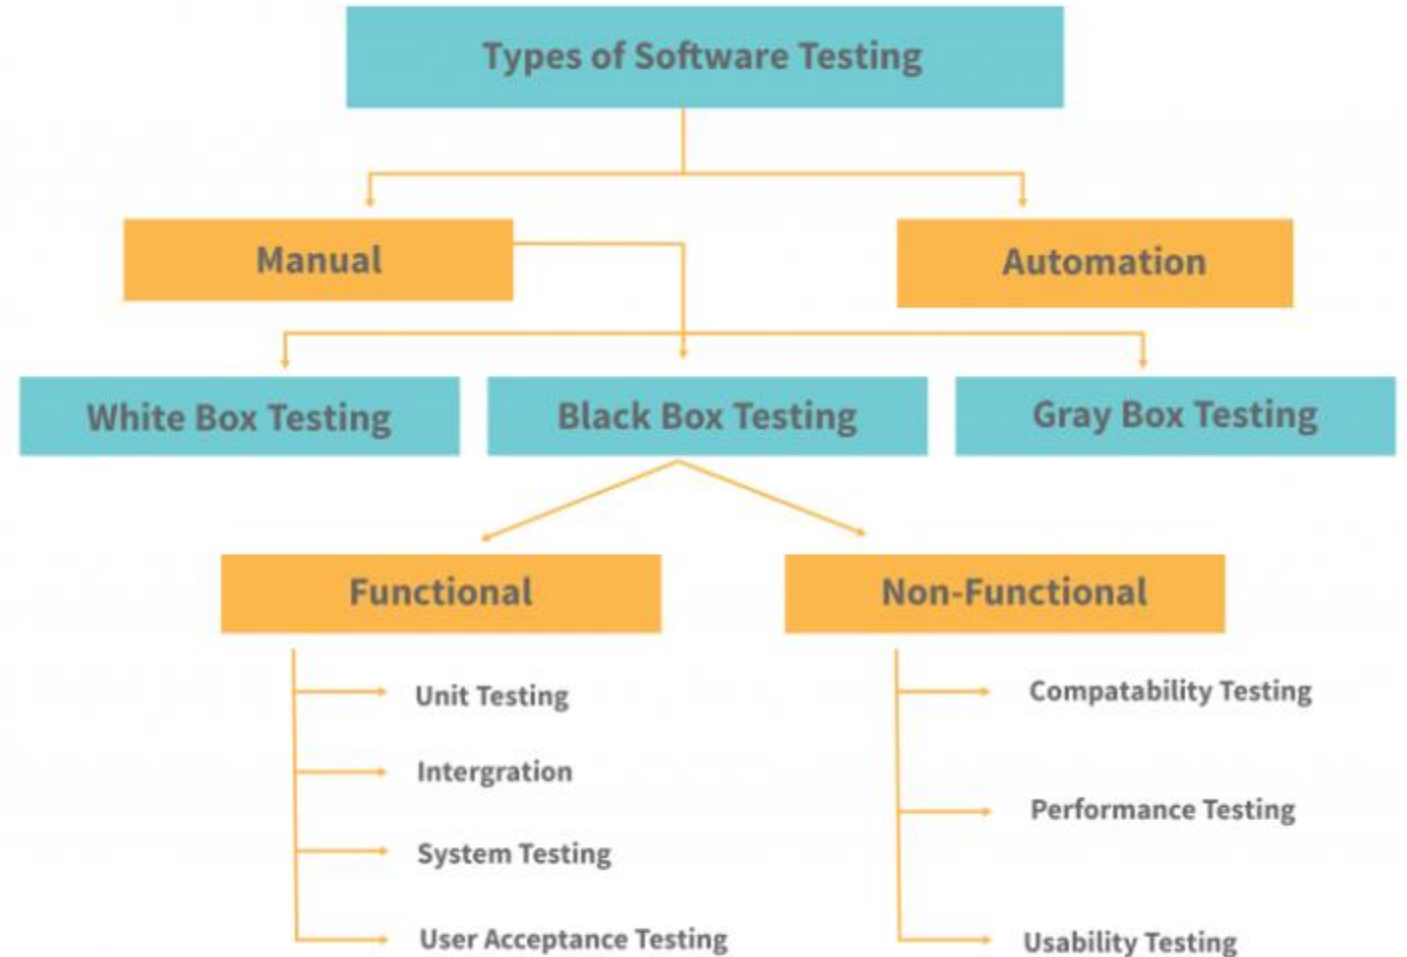

Manual Testing

Manual testing is performed without automation tools. The tester validates the application from an end-user perspective. Focuses on functionality, usability, navigation, and user experience.

For MakeMyTrip :

- Login and Registration
- Flight Search
- Hotel Search
- Cab Booking
- Payment Processing
- Booking Management

Life Cycle of Manual Testing

Test Plan

Test Plan for MakeMyTrip.com Website

1. Test Plan Identifier

File Name: 1.0_MMT_tplan_v1.0.doc

- Document Name: Test Plan – Travel Booking Application
- Version: MMT_TR_1.0
- Date: 27-May-2026
- Location: Coforge Ltd, Hyderabad

2. Document History

REV	Author	Edits	Date
1.0	Utkarsh Anand, Graduate Engineer Trainee	Initial Draft	27/05/2026

3. Introduction

[MakeMyTrip](#) is an online travel booking platform designed to help users search and book flights, hotels, trains, buses, holiday packages, and cab services. The application allows users to register, log in, compare travel options, make bookings, manage trips, cancel bookings, and track travel details.

This test plan defines the testing approach and scope required to validate the functional behavior, usability, reliability, compatibility, and performance of the MakeMyTrip application.

4. Test Items

Specifies **what components/modules** will be tested.

Example:

- User Registration Module
- User Login Module
- Flight Booking Module
- Hotel Booking Module
- Train Booking Module
- Cab Booking Module
- Holiday Package Module
- Notifications Module
- Logout Functionality

5. Features to be Tested

Medium priority features are features that have been stable and High Priority features are features that have been recently changed.

Feature to be Tested	Priority	Comments
User Registration	High	
User Login	High	
Flight Search	High	
Train Search	High	
Bus Search	High	
Hotel Booking	High	
Booking Cancellation	High	
Logout	High	

6. Features NOT to be Tested

- Help Contents and user manuals will not be tested.
- Installation and presentation will not be tested.
- Support of the other architectures also will not be tested.
- Third-party payment gateway internal logic
- Airline/Train/Bus operator backend systems will not be tested.
- Experimental features will not be tested.

7. Test Environment

8. Test Approach / Test Strategy

Describes **how testing will be performed**.

The test strategy for MakeMyTrip1.0 will include manual testing with automated testing(**Selenium With Java**) where time/need permits. Automated testing will be used to test the basic Interface objects keyboard and mouse navigation or any redundant tasks best translated to automation. Automated testing will be limited to a Win-64 platform because of Automation tool limitations.

- Sanity test will include an very short battery of tests to ensure the Naukri1.0 runs/launches and can connect to the back end database(**MySQL /SQL Server 2025**). Test execution will happen as individual component testing. These tests will be fully automated.
- Acceptance tests** will include a short battery of tests that will only touch major features to ensure MakeMyTrip1.0 will operate smoothly at a basic level. These tests will be executed on **Windows 11 Home Single Language**. The goal will be to automate all of these tests.
- Full Functional tests will include a **comprehensive test** of all features listed in this document. These tests will be limited to the Windows 11 pro. These test will include automation with time allowing.

8.1 Types of Testing

- Smoke Testing
- Sanity Testing
- Functional Testing
- Integration Testing
- System Testing
- Regression Testing

8.2 Test Levels

- Unit Testing (by developers)
- Integration Testing
- System Testing
- Acceptance Testing

8.3 Test Techniques

- Black Box Testing
- Boundary Value Analysis
- Equivalence Partitioning
- Error Guessing **Functionality Testing**

Usability Testing

The usability testing will be accomplished by verifying the information in each window are accurate. Menus, icons and toolbar functionality will be tested as applicable to the navigation and results panes. Multi Window Overlapping will be tested because product supports opening of multiple documents.

Robustness/Reliability Testing

Test the GUI for correct keyboard and mouse navigation, windows, menus, buttons, etc. These tests will include Keyboard only navigation of Makemytrip1.0. Mouse only navigation. Correctness and existence of warning/error dialog boxes. The correct/expected functionality of buttons, icons and menus.

Stress Testing

Not applicable

9. Entry and Exit Criteria

9.1 Entry Criteria

Conditions to start testing:

- Requirements approved
- Test environment ready
- Test data available
- Build deployed

9.2 Exit Criteria

Conditions to stop testing:

- All planned test cases executed
- Critical and high defects closed
- Test summary report prepared

10. Test Deliverables

Test plan	1.0_MMT_tplan.doc
Test Specification	1.0_MMT_tspec.doc
Test Automation Plan	TBD
Test Checklist	TBD
Test Logs	TBD
Test tools	Selenium 4.38, Postman, Rest Assured, Jmeter, Jenkins, Git and Git Hub and Appium and MySQL Server 2025

11. Testing Tasks & Resource Needs

- Use of MySQL Server database.
- Write Test Specification.
- Write Test Automation plan.
- Write Test Checklist.
- Setup workspace.
- Develop Automation script.

➤ Minimum requirements for platforms:

Documentation Review		1	1	1	
Total Test Cycle		1	1	1	

13. Risks and Assumptions

Risks:

- **Environment instability** may delay testing execution.
- **Third-party API** failures may affect booking validation.
- **Requirement** changes during testing may increase rework efforts..

Contingencies:

- **Backup resources** available if required.
- **Buffer time** allocated for unexpected delays.
- **Regular Communication:** Daily stand-up meetings to resolve blockers quickly.

Hi Raghavendra,

Hope you are doing well.

I have shared the test deliverables for peer review, including the Test Plan, Test Scenarios, Test Cases, Defect Report, and RTM.

Kindly review them and share your feedback or suggestions at your convenience.

Thank you for your time and support.

Regards,
Utkarsh Anand

Mon, 22 Jun at 10:15 AM

Hi Utkarsh,

Thank you very much for sending across the test deliverables. I have successfully received all the documents, including the Test Plan, Test Scenarios, Test Cases, Defect Report, and the Requirements Traceability Matrix (RTM). I appreciate the effort and attention to detail that has gone into preparing these materials.

I thoroughly reviewed each of the documents to ensure that all aspects of the testing process have been adequately covered. My review will focus on the completeness and accuracy of the test cases, the clarity of the test scenarios, and the traceability between requirements and test cases as documented in the RTM. Additionally, I will examine the defect report to understand the issues identified so far and how they have been addressed.

If there are any particular sections or areas within these documents that you would like me to pay special attention to, please let me know. Your input will help me provide more targeted and constructive feedback.

I have completed my review, I will compile my observations and share detailed feedback with you. If I have any questions or require further clarification during the review process, I will reach out accordingly.

Thank you again for your hard work and for keeping me in the loop. Looking forward to collaborating further to ensure the quality and success of this project.

Good To Go

Best regards,
Raghavendra BN

Automation Testing

Automation Testing is a software testing technique that uses automated tools, scripts, and frameworks to execute test cases, compare actual and expected results, and generate reports with minimal human intervention.

Objectives of Automation Testing :

- Reduce Manual Efforts
- Increase test execution speed
- Improve test coverage
- Enhance accuracy and reliability
- Supports Continuous Integration and Continuous Deployment

Automation Testing

Cucumber

- **Cucumber** is a **BDD (Behavior Driven Development)** testing tool.
- It allows writing test cases in **simple English language** using **Gherkin syntax**.
- It improves communication between **developers, testers, and business stakeholders**.
- Test scenarios are written in **Feature Files (.feature)**.

Commonly integrated with:

- Selenium
- TestNG
- JUnit
- Maven
- Rest Assured

Feature: **Login**

As a user

I want to be able to log in to the application
So that I can access my account information

Scenario: **Successful login**

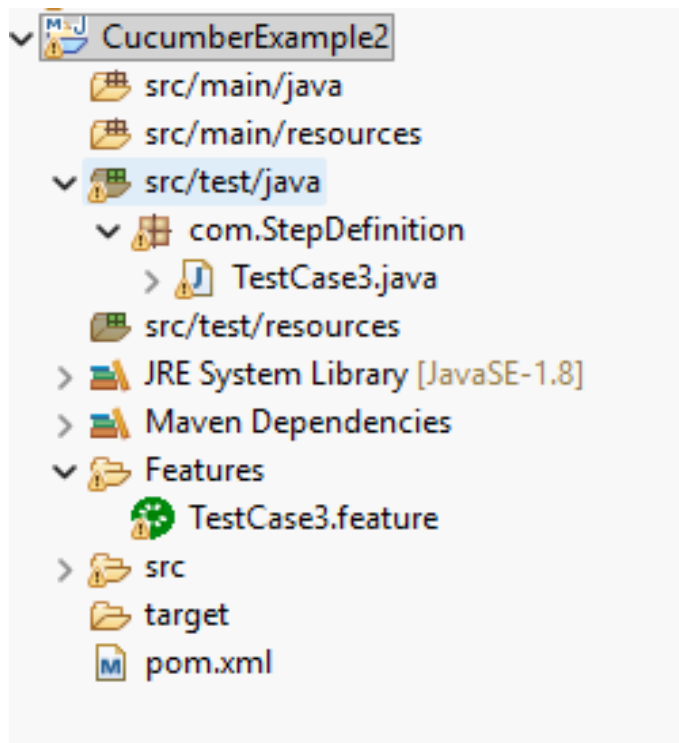

Given I am on the login page

When I enter my username and password

And I click the login button

Then I should be taken to the dashboard page

Cucumber – Project Structure

```
package com.StepDefinition;

import org.openqa.selenium.By;

public class TestCase3 {
    WebDriver driver;

    @Given("Open page")
    public void open_page() {
        driver = new ChromeDriver();
        driver.manage().window().maximize();
        driver.get("https://www.makemytrip.com/login/");
    }

    @When("Type username student into Username field")
    public void type_username_student_into_username_field() {
        driver.findElement(By.id("username")).sendKeys("student");
    }

    @When("Type password incorrectPassword into Password field")
    public void type_password_incorrect_password_into_password_field() {
        driver.findElement(By.id("password")).sendKeys("password");
    }

    @When("Push Submit button")
    public void push_submit_button() {
        driver.findElement(By.xpath("//button[@id='submit']")).click();
    }

    @Then("Verify error message is displayed")
    public void verify_error_message_is_displayed() {
        boolean isDisplayed = driver.findElement(By.xpath("//*[@id=\"error\"]")).isDisplayed();
        Assert.assertTrue(isDisplayed);
    }

    @Then("Verify error message text is Your password is invalid!")
    public void verify_error_message_text_is_your_password_is_invalid() {
        driver.quit();
    }
}
```

Feature: Checking validity  Run |  Debug |  Profile

Scenario: Invalid login with wrong password  Run |  Debug |  Profile

Given Open page

When Type username student into Username field

And Type password incorrectPassword into Password field

And Push Submit button

Then Verify error message is displayed

And Verify error message text is Your password is invalid!

Cucumber – Maven Dependencies

API Testing

API (Application Programming Interface) Testing is a type of software testing that validates whether APIs function correctly, securely, reliably, and meet business requirements without involving the user interface.

Why API Testing is Important?

- Detects defects early in development.
- Faster than UI testing.
- Improves application reliability and performance.
- Verifies data exchange between frontend and backend systems.

JMeter

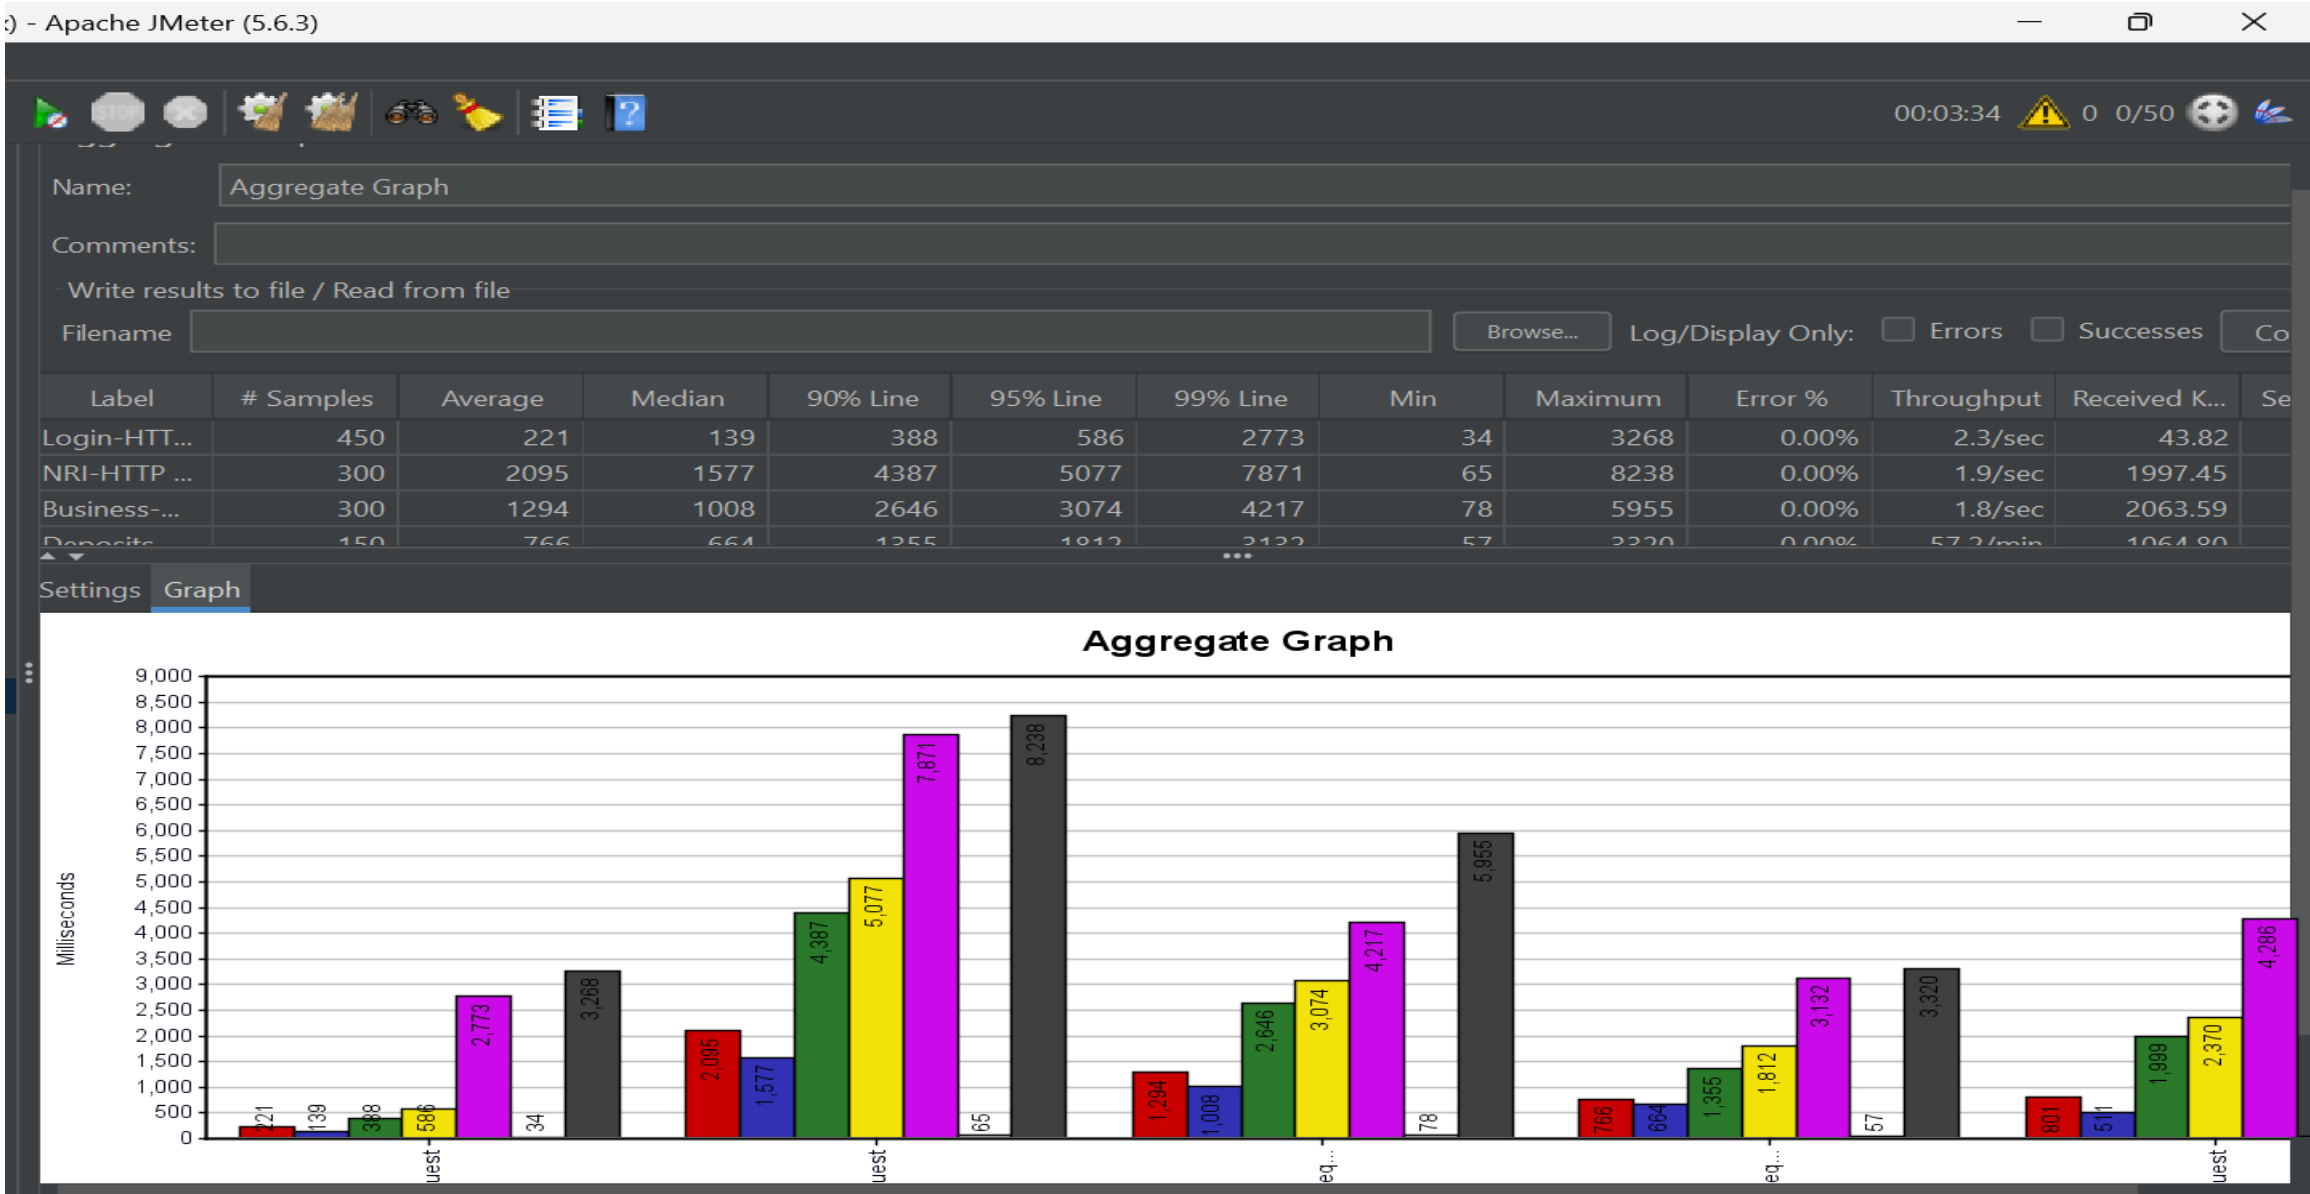

JMeter is an open-source Java-based tool used primarily for **Performance Testing**, **Load Testing**, and **API Testing**. It helps testers measure how an application behaves under different levels of user load.

Uses of JMeter

- Load Testing
- Performance Testing
- Stress Testing
- API Testing (REST/SOAP)
- Database Testing (JDBC)

Testing your API endpoints one by one? Run your entire collection and test end-to-end workflows effortlessly. [Learn more](#) Run Collection

Filter Results

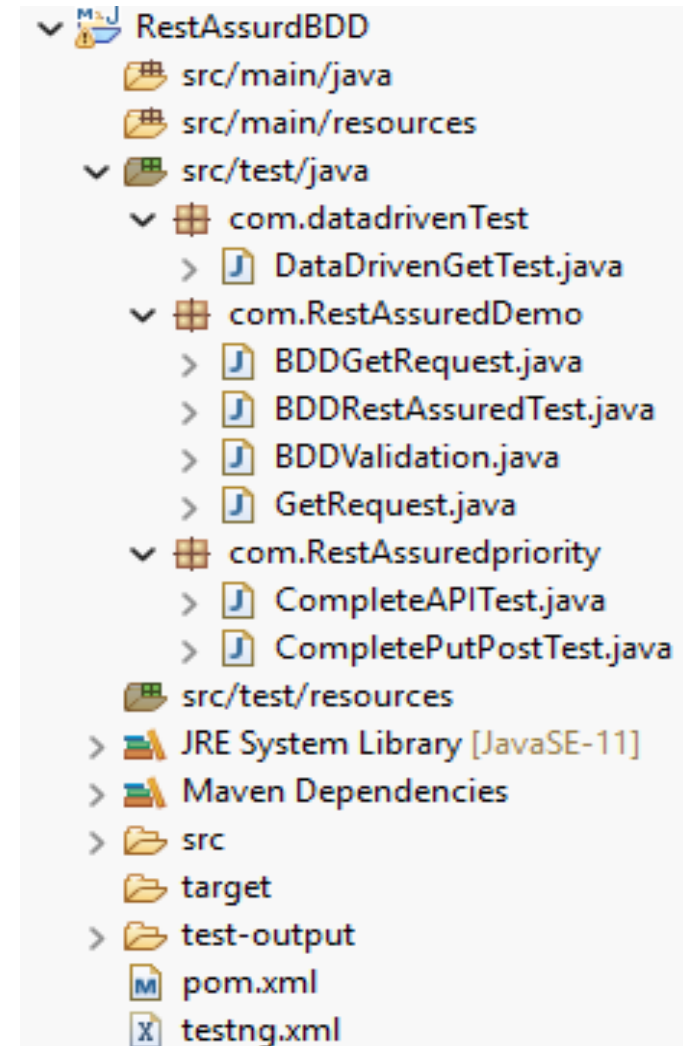

- PASSED** Status code is 201
- PASSED** Response body contains an 'id' field
- PASSED** Response time is less than 2000ms
- PASSED** Content-Type header is present and contains 'application/json'

RestAssured – Automation Framework

Rest Assured is an open-source Java library used for **API Testing** of RESTful web services. It provides a simple and readable way to send HTTP requests and validate API responses using a BDD-style syntax (Given-When-Then).

Why Use Rest Assured?

- Easy API automation in Java.
- Supports all HTTP methods:
 - GET
 - POST
 - PUT
 - DELETE
 - PATCH

Sample Script

```
package com.RestAssuredDemoCaseStudy;
```

```
import org.json.JSONObject;
import org.testng.annotations.Test;
```

```
import io.restassured.RestAssured;
```

```
import static io.restassured.RestAssured.*;
import static org.hamcrest.Matchers.*;
```

Run ALL

```
public class PostRequestBDD {
```

```
    @Test
```

Run / Debug

```
    public void postRequestBDDTest() {
```

```
        RestAssured.baseURI = "https://jsonplaceholder.typicode.com";
```

```
        JSONObject request = new JSONObject();
```

```
        request.put("title", "Test Post");
```

```
        request.put("body", "Hello API");
```

```
        request.put("userId", 1);
```

```
        given()
```

```
            .log().all()
```

```
            .header("Content-Type", "application/json")
```

```
            .body(request.toString())
```

```
        .when()
```

```
            .post("/posts")
```

```
        .then()
```

```
            .log().all()
```

```
            .statusCode(201)
```

```
            .body("title", equalTo("Test Post"))
```

```
            .body("body", equalTo("Hello API"))
```

```
            .body("userId", equalTo(1))
```

```
            .body("id", notNullValue())
```

```
            .time(lessThan(5000L));
```

```
    }
```

```
}
```
